

AXLP Retractable Corrosion Coupon Holders

Pressure ratings up to 1,500 psi (103 bar)

Temperature Ratings up to +260°c (+500°f)

Retractable Corrosion Coupon Holders

Corrosion can be extremely costly, and its control is vital for the integrity management of critical assets. One of the simplest ways to monitor your facility is with the use of corrosion coupons. The corrosion coupon is intrusively inserted into the process system and periodically removed to conduct weight loss and visual analysis.

The Axess AXLP range of coupon holders are designed to allow the insertion and removal of corrosion coupons in pressurized piping systems up to 1,500psi / 103bar. The assembly is connected to a permanently mounted full port valve allowing the operator to install or remove the holder without the requirement to isolate process pressure and avoid expensive isolations or shut downs.

Holders are available for use with flat strip, flush and rod corrosion coupon types in standard lengths of 18", 24", 36" and 48" with longer lengths available on request. Holders are manufactured in 316SS materials with PTFE seals however alternate materials are available upon request.

Sample PN: LPSTCH-18

Key Features

- High temperature (1000°f) option available
- Meets NACE MR1075 & MR0103
- Low cost monitoring option
- Easy installation and maintenance
- Provides average weight loss data
- Physical specimen to identify corrosion type
- 3/4" to 1-1/2" access ports and devices available
